

# *Comprehensive Care for Joint Replacement (CJR) Analysis & Risk Assessment*

*Hundreds of U.S. hospitals are adjusting to comply with CJR (Comprehensive Care for Joint Replacement).*

*Be informed.  
Be proactive.  
Be ready.*

**At BESLER, we make sure that you are ready for what lies ahead.**

We help you understand your exposure and pinpoint key issues that specifically affect your hospital. First, we tie together fragmented CMS data and place it into a framework that illuminates strengths and opportunities for improvement. Then, our experts help you interpret the data, offer specific recommendations for action, and monitor newly published data so you can manage your ongoing efforts.

We provide clarity around the performance of specific physicians and facilities, quality ratings, and episode costs – so you have the power to chart your own course.

We also provide powerful benchmarking data that will allow you to see how you are trending year over year compared to regional and national data on a multitude of variables.

This holistic approach to bundled payment performance is how you thrive under bundled payments.

*Talk to us today about **BESLER's CJR Analysis & Risk Assessment** service, which includes:*

- Target price analysis, discharge trends, provider utilization, and readmissions
- Analysis of quality measures, including HCAHPS and complication rates
- Post-acute care summary and identification of potential collaborators
- Quarterly data analysis and year-end reconciliation
- Regional and National benchmarking information not provided by CMS to participating hospitals

For more information on our CJR Analysis & Risk Assessment service, please contact *Jim Hunter* by email at [jhunter@besler.com](mailto:jhunter@besler.com)
